CHAPTER 1: INTRODUCTION AND OVERVIEW OF THESIS	
1.1 Introduction	1
1.2 Numerical Method of Choice	
1.3 Scope of Thesis	
1.4 General Overview of the Content	
CHAPTER 2: A BRIEF REVIEW OF FINITE-DIFFERENCE TIME-DOMAIN (FDTD) METHOD	11

2.1	Introduction	11
2.2	Differentiation and Finite-Difference Operators	
2.3	Finite-Difference Time-Domain (FDTD) Schemes in One Dimension	
2.4	Characteristics of FDTD Schemes	
2.5	Other FDTD Schemes	
2.6	Further Remarks	
CHAPTER 3: THE YEE'S FINITE-DIFFERENCE TIME-DOMAIN (FDTD) SCHEME FOR MAXWELL'S EQUATIONS		23
3.1	Introduction	23
3.2	Maxwell's Equation and Initial Value Problem	
3.3	Yee's FDTD Formulation	
3.4	Special Conditions	
	Perfect Electric Conductors	
	Dielectric-Dielectric Interface	
	Terminating the Simulation Domain	
3.5	Other Considerations – Numerical Dispersion and Numerical Stability	
	Numerical Dispersion	
	Numerical Stability – The Courant-Friedrichs-Lewy Stability Criterion	
3.6	Implementation of the Basic FDTD Algorithm	
CHAPTER 4: MODELING A PCB ASSEMBLY USING FDTD METHOD		47
4.1	Introduction	47
4.2	Incorporating Conducting Traces	
4.3	Linear Lumped Components	
	Resistor	
	Resistive Voltage Source	
	Capacitor	
	Inductor	
	Wire or Pin	
4.4	Nonlinear Lumped Elements	
	Diode	
	Bipolar Junction Transistor	
4.5	End Notes	
CHAPTER 5: THE FDTD SIMULATION PROGRAM		67
5.1	Introduction	67
5.2	Building a Three-Dimensional (3D) Model from Cubes	
5.3	The FDTD Simulation Engine – An Overview	
	5.3.1 Software Flow	
	5.3.2 Pre-Computation and Look-up Table	

5.3.3	Other Important Objects in the Simulation Engine	84
5.4	The Complete Package	
5.5	Sample Simulation Examples	
	Transmission Line Loaded with Series RL Impedance	
	Crosstalk Simulation	
CHAPTER 6: STABILITY OF FINITE-DIFFERENCE TIME-DOMAIN (FDTD) METHOD WITH NONLINEAR LUMPED ELEMENTS		97
6.1	Introduction	97
6.2	The New Stability Theorems	
6.3	Application Example – Establishing the Stability of a Sourceless 3D Printed Circuit Board (PCB) Model	103
6.4	Extension of the Stability Theorem to 3D Model with Source	
6.5	Simulation Example	
6.6	End Notes	
CHAPTER 7: SIMULATION EXAMPLES AND RESULTS		128
7.1	Introduction	128
7.2	Circuit with Diode	
7.3	Power Amplifier Simulation	
	7.3.1 Two-Steps Transient Simulation	
	7.3.2 Comparison Between Simulation and Measurement	
7.4	Oscillator Simulation	
7.5	Demonstration of Instability	
CHAPTER 8: SUMMARY AND CONCLUSIONS		148
8.1	Summary	148
8.2	Future Work	
8.3	Conclusion	
APPENDIX 1: TRUNCATION ERROR OF FDTD SCHEME		153
APPENDIX 2: COURANT-FRIEDRICHS-LEWY STABILITY CRITERION		154
APPENDIX 3: FINITE-DIFFERENCE POWER RELATION AND V^n		159
APPENDIX 4: STABILITY FOR THREE-DIMENSIONAL FDTD MODEL		174

APPENDIX 5: NEGATIVE REGION FOR RESISTIVE VOLTAGE SOURCE	176
APPENDIX 6: EXTENSION OF STABILITY THEORY TO 3D MODEL WITH NON-PEC BOUNDARY	178
APPENDIX 7: LUMPED ELEMENTS SUPPORTED BY winFDTD SIMULATION ENGINE	187
APPENDIX 8: A BRIEF TUTORIAL ON USING THE winFDTD_draw UTILITY	195
